EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Attorney Allan R. Brett on 21 April 2008.

Please amend the following changes within the claims:

Claim 10 (Currently Amended) A method according to claim 9 **[4]** further comprising for each certificate storing the respective addressable entity in a certificate extension field of the certificate.

DETAILED ACTION

2. Claims 53-55 have been cancelled.
3. Claims 1-8 and 10-52 are pending.

Response to Arguments

4. Applicant's arguments filed 25 January 2008 have been fully considered and they are persuasive.

Allowable Subject Matter

5. **Claims 1-8 and 10-52 are allowed.**
6. The following is an examiner's statement of reasons for allowance: The present invention is directed to a method and apparatus for performing remote notification of records, each having a record identifier. Each record is based on a record-user mapping

or a user name-addressable entity mapping. Each independent claim identifies the uniquely distinct features **“obtaining a record’s record identifier’s respective one or more user names, obtaining from a user name-addressable entity mapping a respective addressable entity, and sending a notification of the record to the addressable entity”**.

Asad et al. (US Patent No. 6,725,240) discloses an apparatus and method for protecting against data tampering in an audit subsystem, for creating and verifying audit logs in a relational database without compromising the ability to detect data tampering in a data processing system.

Asad et al. does not disclose a record-user mapping or user-name addressable entity mapping, maintaining a database having entries for all contact points for a certificate nor remote notification for each record that is to be performed.

Ramsdell, S/MIME Version 3 Certificate Handling discloses a setting up a certificate database in its simplest form to a particular user and a certificate database would function in a similar way as an address book, using the alternative name extension used in the S/MIME as the preferred means to convey the RFC-822 email address that correspond to the entity for this certificate.

Ramsdell does not disclose the end user be notified if problems with the certificate are discovered.

The combination of Asad et al. in view of Ramsdell does not disclose the remote notification of an event sending an email to all contact points notifying the owner(s) of an event.

UniCERT | Policy Support: Operational Controls, discloses that when a certificate reaches the end of its validity period, it can no longer be validated. The subject needs a new certificate, or at a minimum should be informed that their certificate has expired and they should apply for a new certificate and the remote notification of the certificate event should be sent to the email user.

However, either singularly or in combination, the audit system disclosed in Asad et al. combined with the teachings of a mechanism for informing a message receiver or a certificate subject in the event of a problem with a certificate disclosed in Ramsdell and a certificate database disclosed in UniCERT, fail to anticipate or render obvious the claimed limitation of obtaining the record's record identifier's respective one or more user names obtaining from a user name-addressable entity mapping a respective addressable entity and sending a notification of the record to the addressable entity.

Bisbee et al. (US Patent No. 6,367,013) discloses a system and method for providing a verifiable chain of evidence and security for the transfer and retrieval of documents and other information objects in digital formats.

However, either singularly or in combination, Bisbee et al. fail to anticipate or render obvious the claimed limitation obtaining the record's record identifier's respective one or more user names obtaining from a user name-addressable entity mapping a respective addressable entity and sending a notification of the record to the addressable entity.

Tumblin et al. (US Patent No. 6,490,679) discloses a method and system for integrating a security key infrastructure with applications programs on a computer

system. A security key infrastructure service request is transmitted from a first application program to a security integration module.

However, either singularly or in combination, Tumblin et al. fail to anticipate or render obvious the claimed limitation obtaining the record's record identifier's respective one or more user names obtaining from a user name-addressable entity mapping a respective addressable entity and sending a notification of the record to the addressable entity.

6. Therefore, **claims 1, 20, 37, and 46** and the respective **dependent claims 2-8, 10-19, 21-36, 38-45, and 47-52** are in condition for allowance.

Conclusion

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
